1 Introducing Bubble CMS Tree

1.1 Features

Bubble CMS Tree comes with the following features:

- Manage content pages as a tree structure
- Manage permissions on pages (based on customer groups)
- Drag & drop pages
- Auto-generate 301 redirects when URL key changed
- Share pages between store views
- Display Pages in frontend navigation menu

1.2 Compatibility

Bubble CMS Tree has been tested successfully on the following Magento versions:

- Magento CE 1.6.x, 1.7.x, 1.8.x

2 Installation

- Backup your existing database
- Download and unzip extension in your Magento root folder
- Clear cache via “System > Cache Management > Flush Magento Cache”

3 Configuration

3.1 Global Configuration

You can access the extension configuration via “System > Configuration > Bubble CmsTree > General Settings”:

Bubble CmsTree Save Config

 **Bubble CmsTree allows you to manage CMS pages as a tree structure.**
Supports pages permissions, drag & drop, 301 redirects, shared pages and frontend navigation.

General Settings

Enable Permissions	<input type="text" value="No"/>	[STORE VIEW]
Create Permanent Redirect for URLs if URL Key Changed	<input type="text" value="No"/>	[STORE VIEW]
Include Pages in Navigation Menu	<input type="text" value="No"/>	[STORE VIEW]

3.2 Default Pages

Once you have installed the extension, you have to define or verify that the default CMS pages are correctly configured for your store. Go to “System > Configuration > Web > Default Pages”:

Default Pages		
Default Web URL	<input type="text" value="cms"/>	[STORE VIEW]
CMS Home Page	<input type="text" value="Home (default)"/>	[STORE VIEW]
Default No-route URL	<input type="text" value="cms/index/noRoute"/>	[STORE VIEW]
CMS No Route Page	<input type="text" value="-- 404 Not Found 1"/>	[STORE VIEW]
CMS No Cookies Page	<input type="text" value="Home (default)"/>	[STORE VIEW]
Show Breadcrumbs for CMS Pages	<input type="text" value="Yes"/>	[STORE VIEW]

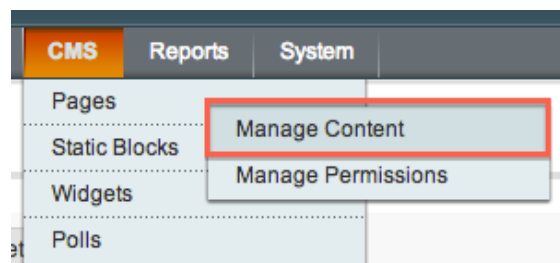

4 How it works

The extension will retrieve all your existing CMS pages and will add them under a root page. The latter will be considered as the store view homepage. If you have multiple stores configured, pages will be added to your existing stores respectively.

5 Manage Pages

5.1 Menu Entry

To manage CMS pages, go to "CMS > Pages > Manage Content":

5.2 Overview

Here is how the tree looks like:

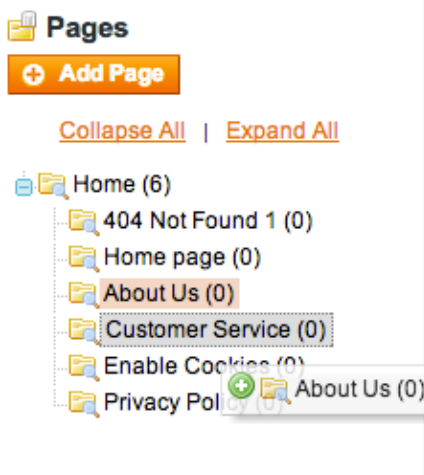

5.3 Multiple Stores

When you have multiple stores configured, you have to switch to the store view you want to manage just as you would do for product creation:

5.4 Drag & Drop

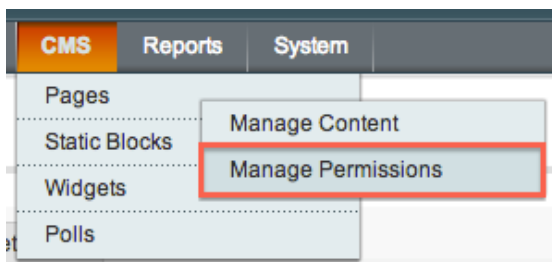

The extension allows you to drag & drop pages to modify sort order or to embed an existing page under another one. Here is an example of how to move “About Us” page under “Customer Service”:

6 Manage Permissions

6.1 Menu Entry

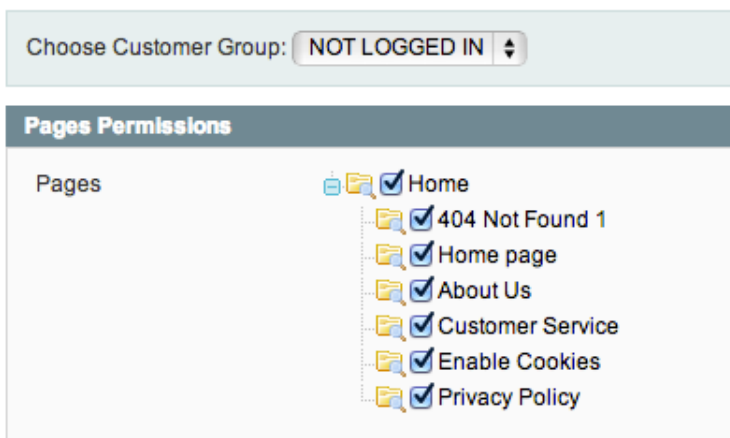

To manage permissions, go to “CMS > Pages > Manage Permissions”:

6.2 Overview

Permissions can be configured for each existing customer group. When you add a new CMS page, the default behaviour is to allow the page to all existing groups. Here is an overview of permissions management:

Manage Content Permissions

6.3 Enable Permissions Management

Permissions management is disabled by default even if you can manage them from menu entry. To enable permissions, go to “System > Configuration > Bubble CmsTree > General Settings”:

Bubble CmsTree

**Bubble CmsTree allows you to manage CMS pages as a tree structure.**
Supports pages permissions, drag & drop, 301 redirects, shared pages and frontend navigation.

General Settings

Enable Permissions	No	[STORE VIEW]
Create Permanent Redirect for URLs if URL Key Changed	No	[STORE VIEW]
Include Pages in Navigation Menu	No	[STORE VIEW]

7 301 Redirects

Bubble CMS Tree allows you to automatically generate 301 redirects when the URL key of a page has changed. This is especially useful for SEO purpose. By default, 301 redirects auto-generation is disabled, to enable it go to “System > Configuration > Bubble CmsTree > General Settings”:

Bubble CmsTree

**Bubble CmsTree allows you to manage CMS pages as a tree structure.**
Supports pages permissions, drag & drop, 301 redirects, shared pages and frontend navigation.

General Settings

Enable Permissions	No	[STORE VIEW]
Create Permanent Redirect for URLs if URL Key Changed	No	[STORE VIEW]
Include Pages in Navigation Menu	No	[STORE VIEW]

8 Share CMS Pages

If you want a page to be accessible from multiple stores, you can switch to “All Store Views” scope and you will be able to associate pages to one or more store views:

Pages

[Add Page](#)

Choose Store View:

All Store Views

[Collapse All](#) | [Expand All](#)

- Home (6)
 - 404 Not Found 1 (0)
 - About Us (0)
 - Customer Service (0)
 - Home page (0)
 - Enable Cookies (0)
 - Privacy Policy (0)

Edit Page 'About Us' (ID: 3)

Page Information

Content

Design

Meta Data

Page Information

Page Title *

About Us

Status *

Enabled

URL Key

about-magento-demo-store

▲ Leave blank for automatic generation.

URL is relative to parent URL. Current URL:

<http://dev.magento.local/index.php/about-magento-demo-store>

Store View

Main Website
Main Store
English
French
German

Include in Navigation Menu

No

▲ Set bubble-cms-tree theme and default package to have an example of navigation

9 Frontend Navigation

9.1 Global Configuration

The extension can generate frontend navigation for you just after categories that are generated natively by Magento. By default this behaviour is disabled, you can enable it via "System > Configuration > Bubble CmsTree > General Settings":

Bubble CmsTree

Bubble CmsTree allows you to manage CMS pages as a tree structure.

Supports pages permissions, drag & drop, 301 redirects, shared pages and frontend navigation.

General Settings

Enable Permissions

No

[STORE VIEW]

Create Permanent Redirect for
URLs if URL Key Changed

No

[STORE VIEW]

Include Pages in Navigation
Menu

No

[STORE VIEW]

9.2 Page Configuration

If frontend navigation is enabled for CMS pages, you can still define the pages of your choice as disabled directly in page information:

Edit Page 'Enable Cookies' (ID: 6)

Page Information

Content

Design

Meta Data

Page Information

Page Title *

Enable Cookies

Status *

Enabled

URL Key

enable-cookies

▲ Leave blank for automatic generation.
URL is relative to parent URL. Current URL:
<http://dev.magento18.local/index.php/enable-cookies>

Include in Navigation Menu

✓ Yes

No

default value.

10 Extension Translations

The extension comes with English and French translations. If you want to contribute, please send an email to contact@bubbleco.de.
